Changelog

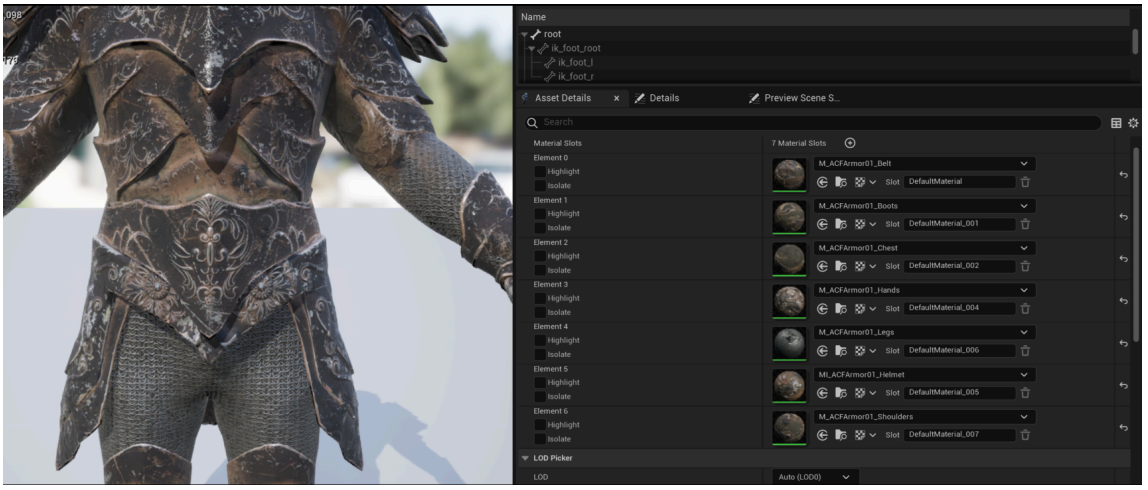
NEW 1.3: Fixed a crash occurring with collisions in the name of the assets

NEW 1.3: Added a Button to automatically fixed the bug below with a button click

5.4 UPDATE BUG:

In 5.4 the unreal LODs system seems to create issues with the merging. If you have a merged wth multiple materials to avoid it being corrupted you have to simply remode and readd the last material as detailed described in the following steps:

- Open the newly merged skeletal mesh
- Hit Ctrl + C to copy the LAST material in the Material Slots array
- Delete the last material in the Slots Array
- Click (+) to add a new Slot in the Material Slots Array
- Paste the copied material in the newly created slot



1.1 Changelog:
