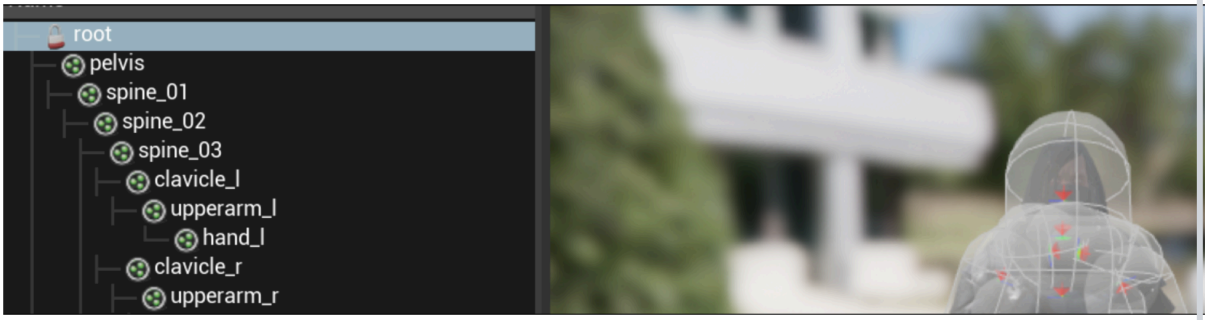
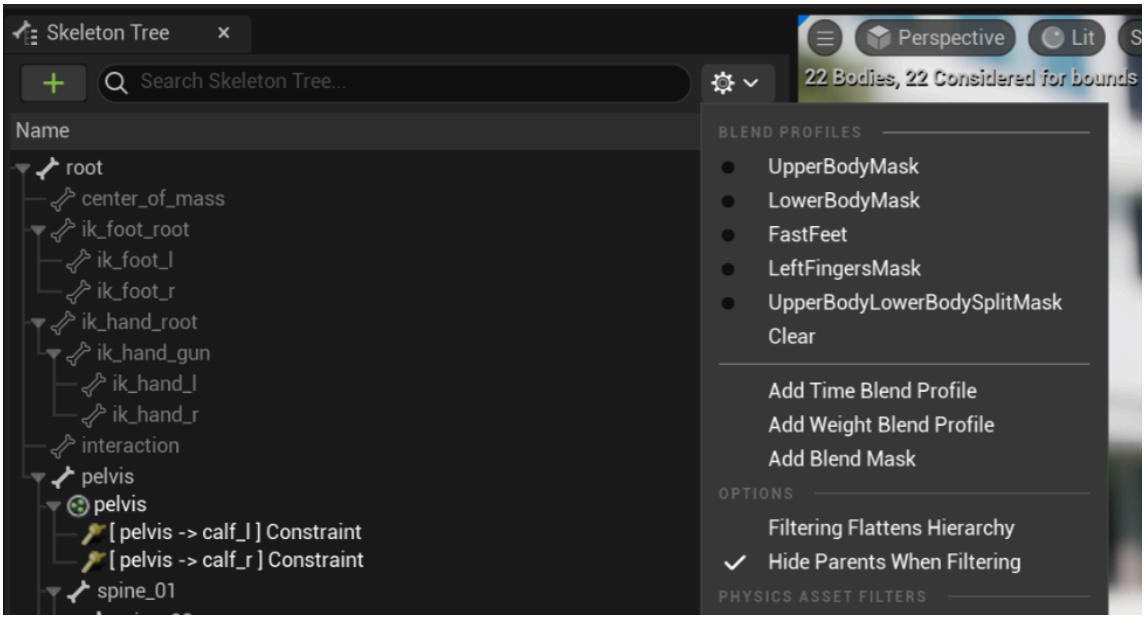
Dynamic Ragdoll - NEW

To let your ragdoll work, you'll need first to modify the phisics asset of your Skeletal Mesh.

Open your phisics asset and modify it as follows:

Set the phisics type of the root as Kinematic and set his collision response to Disabled.





If your phisics asset does not have a Root shape, click on the settings button on top, select, ShowAllBones and then you should see the whole skeleton in the Skeleton Three window.
