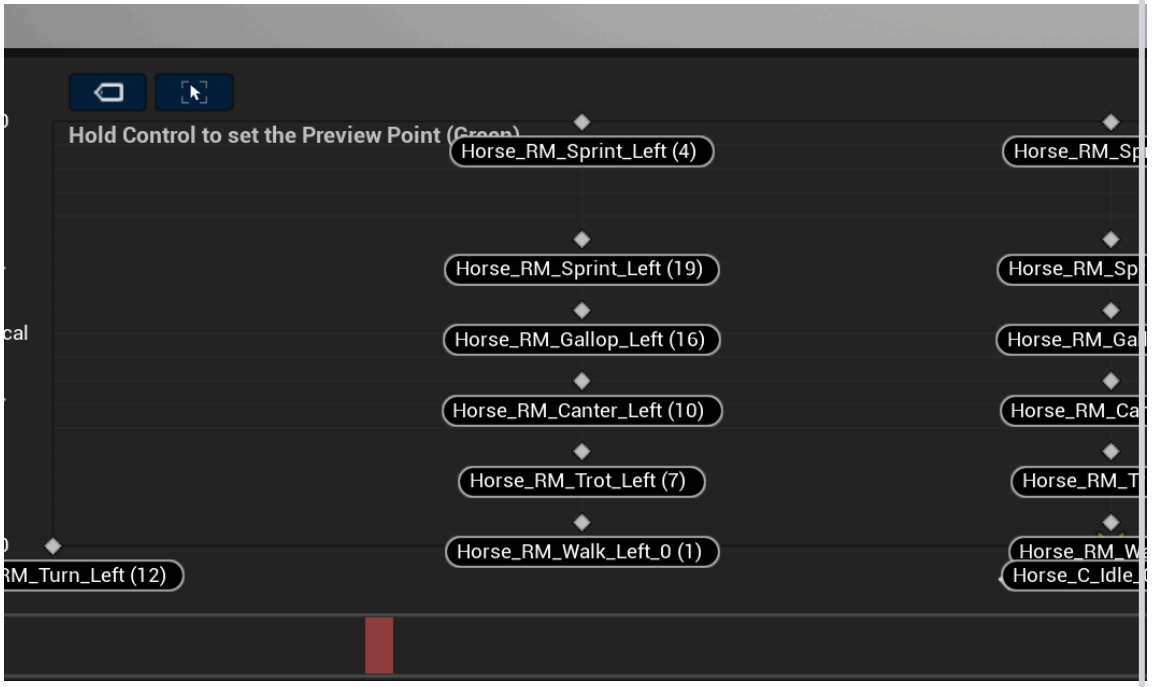
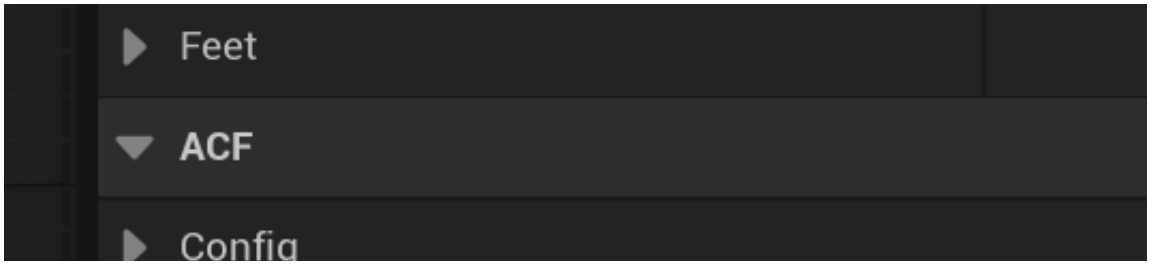
Horse Animset Pro

In this short tutorial we are going to see how to replace the sample horse in the Sample Project with the one from the Horse Animset pro pack.

1. Create a child class from ACF HorseMount BP and add the new Horse Model in the skeletal mesh Component
2. Create a Child AnimBlueprint from ACF Quadruped Base Moveset ABP and select the new horse as target skeleton es: ABP Horse Moveset
3. Create a blendspace for the same skeleton and fill it with the new Horse animation as follows:





4. Create a child AnimBlueprint from ACF Simple Template and select the new Horse Skeleton as target skeleton (ABP_Horse)
5. Assign the ABP_Horse Moveset inside the newly created ABP_Horse
