NEW V4 - AI Text to Speech

ACF U allows you to automatically generate voice lines for your dialogues using **ElevenLabs**.
Follow these steps to set it up properly.

---

1. Configure ElevenLabs in Project Settings

Go to
Project Settings → Ascent Dialogue System → Voice Generation

Fill the following fields:

- **TTS Voice Gen Key** → your personal ElevenLabs API key.
- **TTS Voice API Model** → use `eleven_v3` (or another supported model).
- **TTS Voice Selection API End Point** → `https://api.elevenlabs.io/v2/voices`
- **TTS Voice Generation End Point** → `https://api.elevenlabs.io/v1/text-to-speech`
- **Default TTS Output Path** → folder where generated files will be stored (e.g. `Audio/TTS/`).
- **Final TTS Path / Preview Samples Path** → optional folders for organizing your generated and preview samples.
- **Auto Assign Generated Audio** → keep this **checked** to automatically assign the generated file to your dialogue node.
- **Voice Config Data Asset** → assign your `DA_VoicesConfig` Data Asset.
