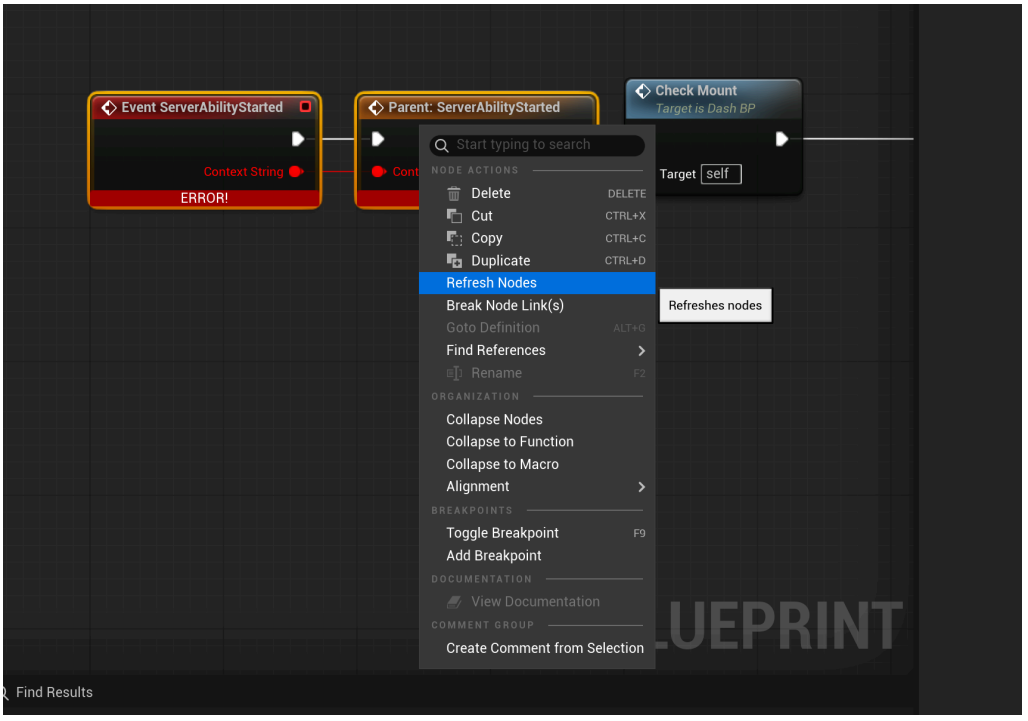
NEW V4: Upgrade to ACF IV

Before starting the upgrade always remember to **make a backup of your entire project!** Including eventually the **old version of your plugins** which can be found in your Project /Plugins folder OR within your engine installation under Engine/Plugins/Marketplace/ ...


- Checks your **Items BP** → The related events may be moved in their counterpart ItemActor.
  Inside every item you'll find an ItemActor property, the actor that will be spawned once this item is used. Delete those events from there and copy the relevant logic in the related Actors.
  - **Armors** may loose their references to their skeletal meshes as in ACF IV armors has an array of Skeletal Meshes to support variations/genders.
- Check Your **Actions BP.** Context String is no longer supported as GAS Abilities triggers does not pass strings. Simply refresh the red nodes to fix the error log.
  - Your **CanExecuteAction** function will still work but is marked as deprecated, use CanActivateAbility from GAS instead
