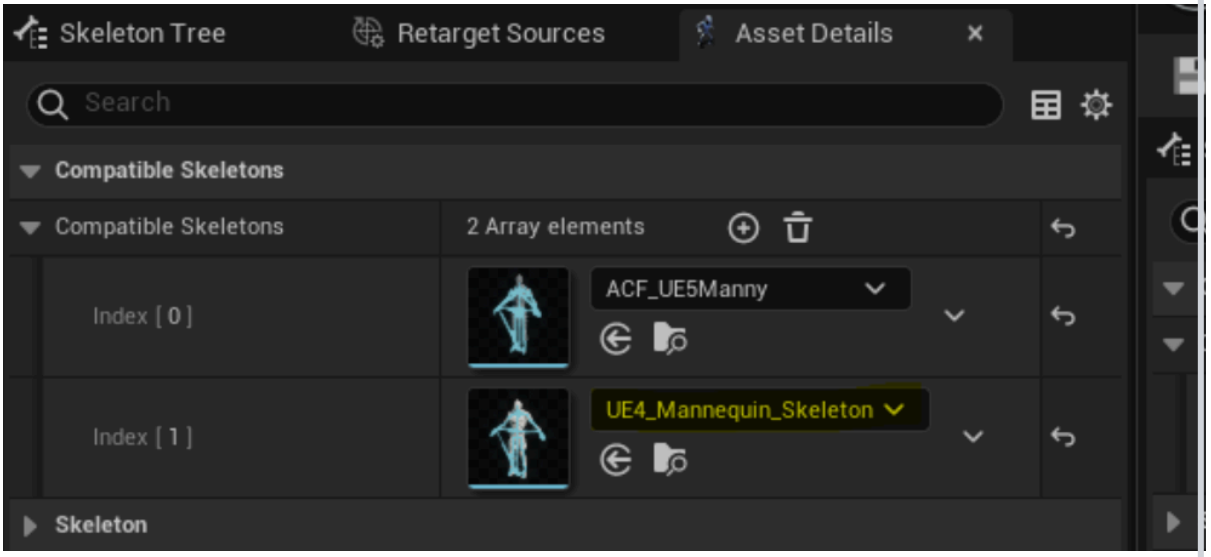
OLD - Animation Retargeting

Marking Compatible Skeletons.

Open up the skeleton(s) of your animations you want to retarget. You will need to set each skeleton as compatible with the ACF UE4_Mannequin_Skeleton (located Plugins/AscentCombatFramework Content/Mannequin/Character/Mesh). This is done through the “Asset Details” window as shown below.



Note: You may need to go to Window and check off Asset Details to get the tab to appear.

Save and close the skeleton windows.

Preparing the Animations.

This part is pretty straight forward. Select all of the animations you want to retarget > Right Click > Asset Actions > Bulk Edit via Property Matrix...
