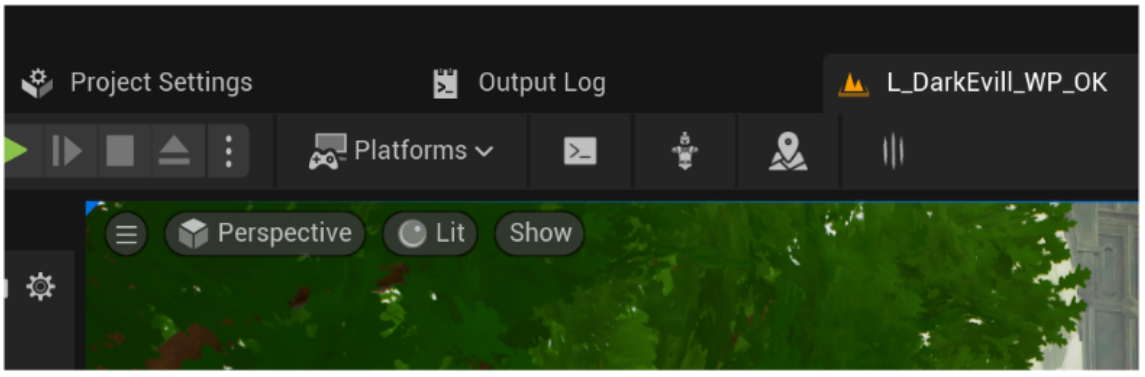
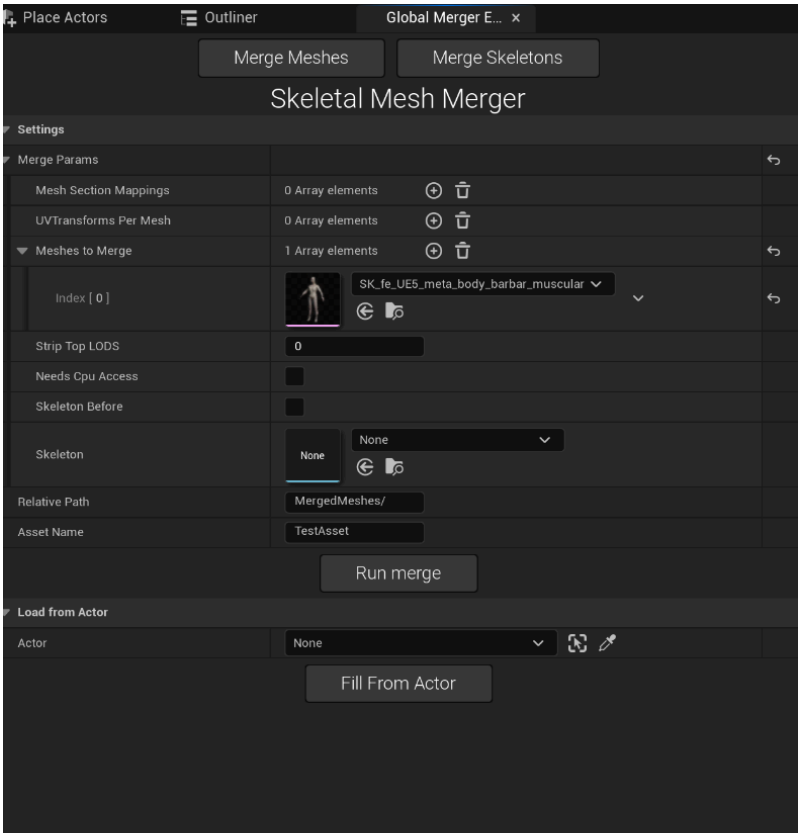
Skeletal Mesh Merger

1. **Run the plugin**

Install the plugin, than you only have to click in the Armor icon that will appear in your editors top bar near the “Platforms” dropdown



2. **Run the Merger**



Add all the meshes you want to merge in to the ***MeshesToMerge*** array.

Optionally set the **Skeleton** property force the final mesh to be assigned to the skeleton .

You can eventually strip the highest LOD of the meshes to merge for further optimization (**StripTopLods**).
