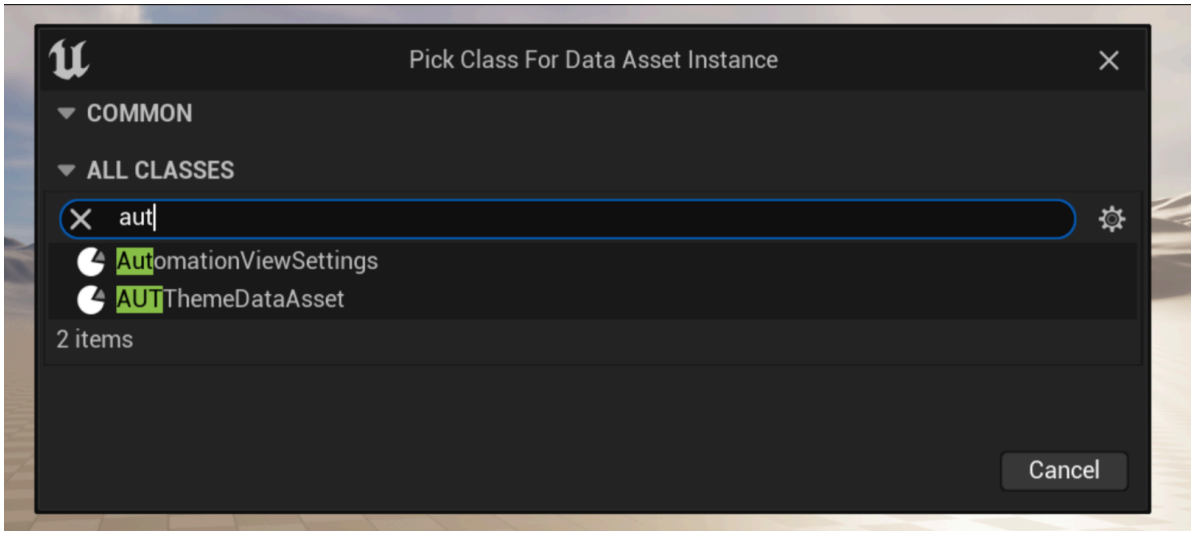
Style Manager

Using Style Manager

Style Manager is a simple yet powerfull tool to centralize your UI setting configs so that you can reskin and tune easily your entire UI without having to dig inside hundreds of widget.

To create a new style just create a new data asset by right clicking in content browser -> Miscellaneous -> DataAsset and select **AUTThemeDataAsset.** (This will be probably added in the menu to make things easier)



Inside the data asset you can configure all your basic items including:

- ANS_Buttons
- ANS_Text
- ANS_Sliders
- ANS_Combo Boxes
- AUT_Backgroun
- ANS_Checkboxes
- and more

All the base widget inside the tool support Style manager natively, for every item type you can define multiple stiles.
