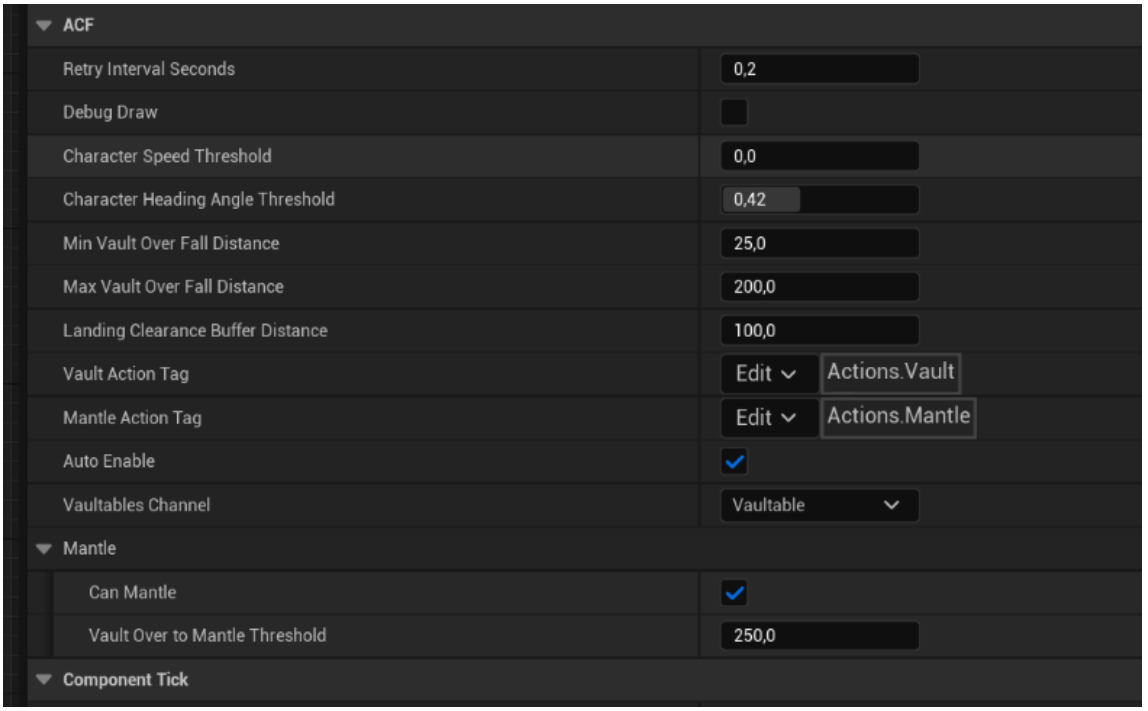
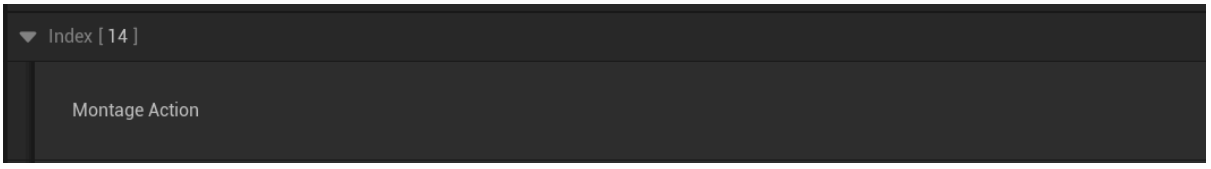
Vault & Mantle

To enable Vault & Mantle in your character you'd need to add to it the **ACF_VaultComponent_BP** and configure his properties:



- *RetryIntervalSeconds* : how often it should check for mantle (not done in tick for performance)
- *CharacterSpeedThreshold* : if you may only vault after a certain speed
- *Vault / Mantle Action*: the action to be triggered for vault / mantle
- *Vault Over Mantle Threshold* : if the width of the item to be vaulted is above the threshold, it will mantle it instead.


Then you'd need to implement those Actions in to your ActionsSet.
